Skills

Tech Lead · Typescript · React Native · ReactJs · NodeJs · NextJs · SQL · Expo

Data Structures · AWS · Google Play · App Store · UI & UX · Styled Components

Clean Code · Clean Architecture · Javascript · Tailwind · Python

Works

Salvus | Tech lead | Development
JUN 2020 - Moment

- Team leadership and building applications focused on homecare assistance and management.
- Development, builds, testing, and maintenance of an IOS-focused application and backend API, working on designing features and system architecture, as well as refactoring and injecting standardization tools.
- Application development with more than 2,000 daily active users and more than 22,000 views performed monthly;

Devot | Founder | Teacher
JUN 2023 - Moment

- Devot is an initiative aimed at teaching programming in a practical manner to individuals looking to change careers. The classes simulate real work environments, where each student must present their progress in daily meetings, and their activities are planned, reviewed, and supplemented with lessons.
- I taught classes on Scrum methodology, backend development in Node.js and Typescript, and frontend development in ReactJS.

SEGSAT | Support Analyst | Engineering Intern
ABR 2018 - DEZ 2019

- Development and bug fixes on backend applications in Java and Node.js, using Oracle SQL and MongoDB databases. On the frontend, I implemented layout changes in web systems.
- I became an expert in GBUS software, a fleet management system. During this period, I maintained direct contact with the client, providing training and guiding them through the initial steps of using the tool, gathering requirements for adjustments or new features, and configuring vehicle trackers.

Education

Rocketseat
Assemble
2023

UPE
Bachelor of Computer Engineering
2017-2022
